Customized Nord Beamer Theme

A simple beamer theme that uses "Nord" color scheme

Original by Junwei Wang
Customized by Simon A. Bjørn

» **Usage**

This is an edited version of the original theme by Junwei Wang. The original theme can be found at
https://github.com/junwei-wang/beamerthemeNord.

The changes done to the theme are settings I wanted to have for my own presentations. These changes are:

* Added a '\pin'-command to be able to create bullets (∗) outside of itemize environments
* Added Nord-styled listings for any language defined in the listings package and Julia.
  Inline listings with the \cinl{lang}{...code...}. For Julia, use \jlinl{...code...}
  Block listings with the clisting environment. For Julia, use jllisting.
* Changed text color in blocks to Nord's white color for better contrast. See slide 3.

» Code listings

Julia specific:
Inline: `println("Hello World!")`
Block:

```julia
1  using LinearAlgebra
2
3  A = rand(3, 3)
4  println(eigvals(A))
```

Any other language from listings
Inline:
`std::cout << "Hello World!" << std::endl;`
Block:

```cpp
1  #include <iostream>
2
3  int main() {
4      std::cout << "Hello World!" << std::endl;
5      return 0;
6  }
```

This is a Block

$$a^2 + b^2 = c^2$$

This is an Example Block

$$E = m \cdot c^2$$

This is an Alert Block

$$e^{i\pi} + 1 = 0$$

Horizontally-Aligned Block

$$\log xy = \log x + \log y$$
